WEATHERBANK, INC.

THE MOST TRUSTED HISTORICAL DATABASE - USED BY VIRTUALLY EVERY ISO, REGULATED & UNREGULATED COMPANY IN THE INDUSTRY

Forecasting an accurate energy load requires:

- ***building the right load-predicting model from historical records;***
- ***properly training the model to predict future trends; and***
- ***successfully operating the model with real-time weather forecasts.***

WEATHERBANK has the historical weather data you need to accurately develop, train and test your models.

Our database dates back the full period of record for every location in North America. In those instances where we found erroneous or missing data, we corrected the errors by incorporating climatological information and using interpreted data from surrounding sources.

We can deliver your historical data to you via E-mail, HTTP, FTP, CD-ROM, floppy disk, hard copy and/or graphically display the data on a private weather web site, whatever is the most convenient for you. Our data can be in your hands within mere hours, not days.

WEATHERBANK can also produce any unique calculated variable you may require, such as proprietary heating or cooling indexes. Our meteorologists will work with your personnel to define those weather variables that work best for your unique situation.

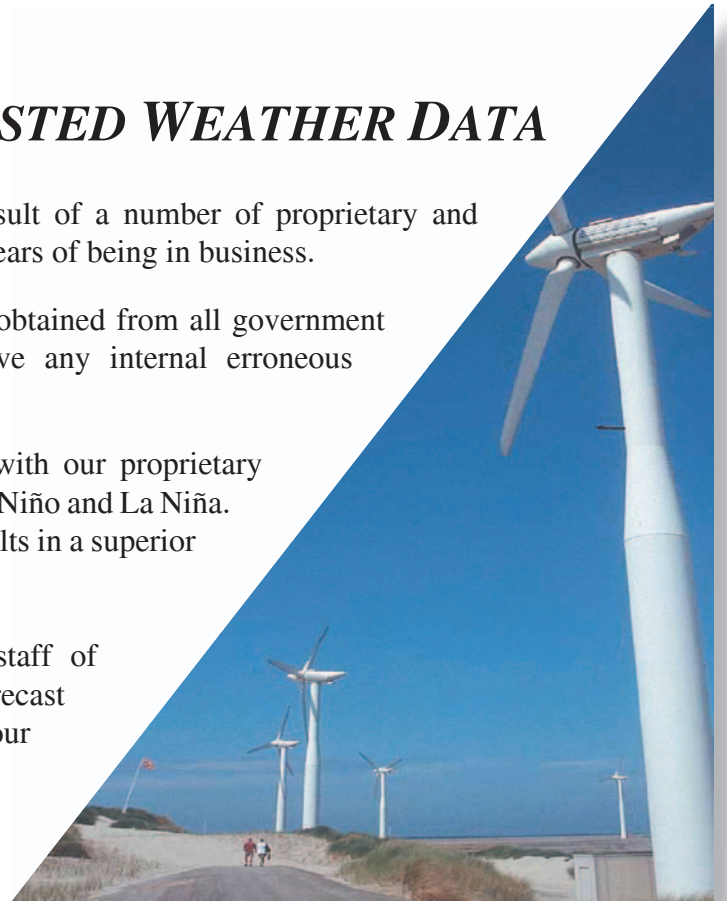

THE MOST ACCURATE FORECASTED WEATHER DATA

At *WEATHERBANK, INC.*, our hourly forecasts are the result of a number of proprietary and automated routines that we have developed through the 30 years of being in business.

Our forecasts originate from the output of raw model data obtained from all government agencies, which have been statistically altered to remove any internal erroneous information.

The corrected output from the models is then combined with our proprietary interpretations of prevailing climatological trends, such as El Niño and La Niña. This process further reduces any remaining variance and results in a superior forecast product.

These products are then reviewed and refined by our staff of seasoned and experienced meteorologists - resulting in a forecast product with the highest accuracy. As a testament to your capabilities, virtually every ISO, regulated and unregulated company involved in the industry today, instill their trust in *WEATHERBANK* to be their provider for weather data, products, and services.

24 / 7 / 365 METEOROLOGICAL SUPPORT & QUALITY CUSTOMER SERVICE THAT IS SECOND TO NONE

Our staff of nearly 30 meteorologists is available at any time to address your weather needs and concerns. Whether you need additional insight on the severity of the heat wave stalled over the Chicago area or want our opinion on the affects of the current El Niño on temperature forecasts for the next 12 months - we will provide the support and answers that you require.

We also maintain a staff of qualified and courteous professionals to address our clients' more routine needs. For example, you may need historical weather data from several locations in a different territory or you may need one of our staff to walk you through the menus of the proprietary web site we've built for you; no question or concern is too insignificant, and we *never* charge any additional fees for this service. We feel our "Always On Call" status, is just part of our normal level of support.

Along with our staff of meteorologists and customer service personnel, we maintain a full staff of computer programmers to address and service your IT needs.

BROADBAND CONNECTIVITY WITH REDUNDANT ACCESS POINTS

Having access to the best weather information is meaningless if you are unable to receive your products in a timely manner.

We eliminate the communication issues by having multiple delivery options available to our clients. Our options include HTTP, FTP, XML, CD-ROM, E-mail, hard copy and/or via our private, digital satellite feed. Our precise data can be available to view and use immediately.

AUTOMATED DATA PROCESSING

Regardless of what forecasting model you employ- R.E.R's Metrix ND® or MDauto®, NewEnergy's NOSTRADAMUS® or autoNOST®, Henwood's EnerPrise® or a custom model that you have developed; *WEATHERBANK* pre-formats your weather data for seamless integration and increased reliability. We've even provided our data in multiple formats simultaneously to allow our clients the time savings created by reviewing more than one load model in real time. Another positive attribute from being on board with us is that all of your processes are completely automated. Once initialized, the process of receiving hourly weather data is a "hands-off" scenario. There is no reason to watch or adjust the processes unless you desire to add more locations or to transfer model formats. In such case, we will do most of the work, immediately upon your request.

Most importantly, our IT department has the expertise in the operations of load models, communication systems, networks and operating systems; and our staff is available for service to our clients at all times.

WHAT OUR CLIENTS ARE SAYING ABOUT US

“At CAISO, we depend on accurate weather forecasts and timely updates. We frequently receive reports concerning changes in the weather from *WEATHERBANK*'s employees and we depend on their professionalism and diligence.”

“THANK YOU...for all of the assistance you provide to RG&E. We look forward to working with you in the future.”

“Due to the deregulation of the gas industry, [weather] information is crucial in our day-to-day operations of supplying our customers with gas at the lowest price. *WEATHERBANK* goes that extra step to meet our specific needs on time and at cost.”

“[*WEATHERBANK*] has excellent service addressing our needs as if we were their only client.”

“*WEATHERBANK*'s team has consistently provided us with the best data and weather forecasts.”

“*WEATHERBANK*'s personnel have always responded to my requests timely and to my satisfaction.”

ABOUT WEATHERBANK, INC.

WEATHERBANK, INC. is a full-service meteorological consulting company that provides weather risk services, products, data (including historical, real-time and forecasted) and custom programming solutions for clients in all industries. We have been excelling in this endeavor for more than 30 years.

We produce an exhaustive database of weather products that can benefit every risk professional, in all sectors of the energy industry. We also produce sector- and client-specific custom weather products to enhance your unique operations. Our staff, which includes Meteorologists, IT Professionals, and Graphic Artist, is also available to support your needs on a 24/7/365 basis.

Our proprietary forecasting routines are continually being enhanced to produce products with the highest accuracies, both in the near- and long-term time frames. Our enhancements rely heavily on statistical integration and new techniques that we develop. Through time, we have been successful in significantly reducing the volatility of our predictions and, consequently, risk management professionals recognize *WEATHERBANK*'s services as the most accurate and reliable in the weather industry.

Call today at **1-800-687-3562** for a personal consultation. You are never under any obligation and a professional, courteous representative will explain more of the solutions and benefits that *WEATHERBANK* can provide to your company.
